

## Illuminated Inspection Magnifier

Illuminated Inspection Magnifier is a consistent tool that helps the manufacturer in testing the small components or parts using a magnified glass. It uses a convex lens to obtain magnified image of the object.

- Easy visual quality inspection
- Fitted with special imported lens and illuminator
- Illumination provided from top onto the test object
- Adjustable height and angle of inspection

With Illuminated Inspection Magnifier, magnified image of the object is seen along with light source from its top for clear visibility of test objects.

\* Any one select at the time of order.

### Key Specifications:

|                      |                            |
|----------------------|----------------------------|
| Lens                 | Convex                     |
| Light Source Wattage | 20 W                       |
| Power                | 220V , Single Phase, 50 Hz |

### Highlights:

|                  |                |
|------------------|----------------|
| Magnifying glass | 1              |
| Arm              | Adjustable Arm |
