

Eccentricity tester

The eccentricity tester is an accurate device to calculate the eccentricity of PET bottles.

The testronix eccentricity tester consists of a high adjustment knob feature to adjust the height of the gauge to provide easy operation. The eccentricity calculation is important for manufacturers as it enhances the quality and durability of the products manufactured by them. The instrument adheres to industry standards and has 100% compliance to ensure safety of the user.

Features

- Easy and accurate operations
- Comes with Zero Tolerance
- Revolving type equipment
- Repeatability in test measurements of preforms with Preform Eccentricity Tester, PET Preform Eccentricity is checked as the shape, size and quality of product on its eccentricity.

Key Specifications:

- Range 0 – 10 mm
- Least count 0.001 mm
- Display LCD (Digital)
- Dimensions 310 x 100 x 275 mm
- Stand Magnetic adjustable arm stand
