

Illuminated Inspection Magnifier

Illuminated Inspection Magnifier is a consistent tool that helps the manufacturer in testing the small components or parts using a magnified glass. It uses a convex lens to obtain magnified image of the object.

- Easy visual quality inspection
- Fitted with special imported lens and illuminator
- Illumination provided from top onto the test object
- Adjustable height and angle of inspection

With Illuminated Inspection Magnifier, magnified image of the object is seen along with light source from its top for clear visibility of test objects.

Features

- Magnifying glass - 1
- Arm - Adjustable Arm

Specification

- Lens - Convex
- Light Source Wattage - 20 W
- Power - 220V , Single Phase, 50 Hz
