Illuminated Inspection Magnifier

Illuminated Inspection Magnifier is a consistent tool that helps the manufacturer in testing the small components or parts using a magnified glass. It uses a convex lens to obtain magnified image of the object.

- Easy visual quality inspection
- Fitted with special imported lens and illuminator
- Illumination provided from top onto the test object
- Adjustable height and angle of inspection

With Illuminated Inspection Magnifier, magnified image of the object is seen along with light source from its top for clear visuality of test objects.

* Any one select at the time of order.

Key Specifications:

Lens	Convex
Light Source Wattage	20 W
Power	220V , Single Phase, 50 Hz

Highlights:

Magnifying glass	1
Arm	Adjustable Arm
